| <b>Canteen Connect</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | june 2025      |
| <ul style="list-style-type: none"><li>• Built a cross-platform food ordering application using React Native, React.js, Node.js, and ServiceNow as the database for managing canteen operations.<ul style="list-style-type: none"><li>– <b>Menu Cart System:</b> Allowed users to filter food items by category/cost and place orders with a detailed cart and order confirmation.</li><li>– <b>Issue Review Panel:</b> Enabled students to rate meals, submit reviews with photos and comments, and raise issues for resolution.</li><li>– <b>Power Panel (Admin):</b> Provided managers with tools to manage items, track sales, and monitor top-sellers via a graphical dashboard.</li><li>– <b>Smart Features:</b> Integrated a smooth dark theme, time-slot based canteen selection, and a chatbot-based virtual agent.</li></ul></li></ul> |                |
| <b>Blood Care</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | October 2024   |
| <ul style="list-style-type: none"><li>• Created a "Blood Care" platform focused on "Blood Donation" management using React for the front-end and MongoDB for the database.<ul style="list-style-type: none"><li>– <b>Admin Page:</b> Manages over <b>100+ user and donation records</b>, streamlining data management.</li><li>– <b>Registration Page:</b> Streamlined user sign-up process, reducing manual data entry by <b>80%</b>.</li><li>– <b>Student Home Page:</b> Displays user-specific details such as name, roll number, blood group, and contribution history, improving user access and experience across <b>100+ active users</b>.</li><li>– <b>Procedure Page:</b> Guides users through the donation process, increasing donor sign-ups by <b>30%</b>.</li></ul></li></ul>                                                      |                |
| <b>Safeguard India — Smart India Hackathon</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | September 2024 |
| <ul style="list-style-type: none"><li>• Contributed the idea for the Safeguard India project focused on disaster management, which was selected up to the college level.</li></ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                |

## Finance Tracker

July 2024

- Crafted an intuitive front-end interface for the Finance Tracker application, leveraging HTML, CSS, and JavaScript; achieved a 25% increase in user interactions, leading to positive feedback from over 50 users.
- Designed 5+ interactive charts to visualize financial data, resulting in a 20% improvement in user retention.

## INTERNSHIPS

---

- **Full Stack Development with React Native** [*Technical Hub*] 2024 – Present
  - Completed a year-long internship focused on Full Stack Development using React and React Native at Technical Hub.
  - Gained end-to-end development experience from foundational technologies like HTML, CSS, JavaScript, and Bootstrap to advanced stacks including React.js, Node.js, MongoDB, and React Native.
  - Developed the “**Canteen Connect**” mobile app during the PROJECT SPACE initiative — a full-featured React Native application for digital food ordering and management.
- **ServiceNow Developer Internship** [*SmartBridge*] May - June 2025
  - Gained hands-on experience with the ServiceNow platform, focusing on low-code app development and ITSM workflows.
  - Developed and deployed an “Educational Organization Management” project using ServiceNow Studio.
  - Designed and automated modules for student registration, course allocation, and issue tracking using Flow Designer.

## ACHIEVEMENTS

---

- Secured **1st Prize** in the **ECE Expo** at the **Veda Technical Event**, Aditya College of Engineering and Technology. Presented key aspects of Electronics and Communication Engineering (ECE), focusing on **SENSORS**, their working principles, types, real-world applications, and role in automation and IoT.
- Advanced to the **college level** in the **Smart India Hackathon** (2024) with a project titled “**Safeguard India**” aimed at protecting human safety and disaster management.

## CERTIFICATIONS

---

- Earned a credential in **HTML, CSS** from IT Specialist Certiport. [View Certificate](#)
- Achieved a certification badge in **Java Script** from Credly. [View Badge](#)
- Earned the **Python Essentials 1** certification issued by Cisco via Credly. [View Badge](#)
- Successfully completed **Introduction to Networks** course from CISCO. [View Certificate](#)
- Accomplished **JavaScript Essentials 1 and 2** training from CISCO. [View Certificate](#)
- Achieved a certificate in **Basics of JavaScript** from HackerRank. [View Certificate](#)
- Awarded credentials for participating in **Tata Crucible Campus Quiz 2024** and **Flipkart GRiD 6.0 - Software Development Track** from Unstop. [View Certificate](#)
- Earned a **Professional Certificate in Communication Skills** from RITx (edX), successfully completing all courses in the program. [View Certificate](#)
